

1 Screen Layout

The screen layout defines the arrangement of interface components across all screens in AIMS. A consistent layout ensures users can navigate the application intuitively without relearning structure on each page.

1.1 RESOLUTION & VIEWPORT

Property	Standard	Notes
Minimum resolution	1366 × 768 px	Target for most desktop/laptop screens
Optimal resolution	1440 × 900 px	Design reference resolution
Max content width	1280 px	Content area is centered with auto margins
Horizontal padding	32 px	Applied on both sides of the content area
Target platform	Desktop web browser	AIMS is a desktop-only web application; no responsive/mobile layout is required

1.2 GLOBAL LAYOUT STRUCTURE

Zone	Position	Height / Size	Contents
Header	Top, full width, fixed	60 px	Logo, navigation links, search bar, cart button
Sidebar	Left of content area	200 px wide	Category filters, price range filter (homepage only)
Main content	Right of sidebar / full width	Flexible	Primary screen content
Page title	Top of main content area, left-aligned	22 px font	Name of the current screen; left-aligned to align with body content (not centered, as a persistent sidebar is present)

1.3 STANDARD ELEMENT POSITIONS

- Logo:** Top-left corner of the header.
- Navigation links:** Inline in the header, immediately right of the logo (left-center zone). This is intentional for a web application where the logo and primary nav form a single left-anchored group, rather than a top-right menu bar used in desktop applications.
- Search bar:** Center of the header, flexible width.
- Cart button:** Top-right corner of the header.
- Primary action buttons** (Add to Cart, Place Order, Confirm): Bottom-right of the form or content card, full-width inside summary panels.
- Back/Cancel buttons:** Left of or below primary action buttons.
- Close button (X):** Top-right corner of any popup or modal dialog.

2 UI Kit

The UI Kit defines all visual design tokens used across AIMS screens. Every team member must use these exact values to ensure a consistent appearance.

2.1 TYPOGRAPHY

Font family: Inter (Google Fonts). Fallback: system-ui, sans-serif.

Page Title	22 px · Bold 700	Your Cart
Section Title	15 px · Bold 700	Order Summary
Subsection	14 px · SemiBold 600	Delivery information
Body	13 px · Regular 400	Product title, form labels, general text
Caption	12 px · Regular 400	Author name, stock info, helper text
Label / Badge	11 px · SemiBold 600	CATEGORY · BOOK · IN STOCK

2.2 COLOR PALETTE

Primary Blue #1D4ED8	Price / Accent #DC2626	Text Primary #111827	Text Secondary #575757
Text Muted #6B7280	Background #F9FAFB	Border #E2E7EB	Success / Stock #05866B

2.3 SPACING SCALE

Token	Value	Usage
XS	4 px	Gap between icon and label, tight inline elements
S	8 px	Gap between form label and input, badge padding
M	12 px	Card internal padding (tight), between list items
L	16 px	Card internal padding (standard), section gap
XL	24 px	Between major layout sections
XXL	32 px	Page horizontal padding

2.4 BUTTONS

Type	Background	Text	Border	Usage
Primary	#1D4ED8	#FFFFFF · 14 px Bold	None	Main actions: Add to Cart, Place Order, Confirm
Secondary	#FFFFFF	#374151 · 14 px Regular	1 px #D1D5DB	Back, Cancel, Continue Shopping
Small	#FFFFFF	#374151 · 12 px Regular	1 px #D1D5DB	Detail, inline actions on product cards

- Border radius:** 6 px for all buttons.
- Padding:** 12 px top/bottom for primary; 6 px top/bottom for small.
- Disabled state:** opacity 0.4, cursor not-allowed.

2.5 ICONS

- Icon set:** Heroicons (outline style) or equivalent stroke-based icon set.
- Size:** 16 × 16 px for inline icons; 20 × 20 px for standalone icons.
- Stroke width:** 2 px.
- Color:** Inherits from surrounding text color; primary actions use #1D4ED8.

2.6 FORM INPUTS

State	Border	Background	Notes
Default	1 px #D1D5DB	#FFFFFF	Placeholder text: #D1D5DB
Focus	1 px #1D4ED8	#FFFFFF	Box shadow: 0 0 2px #DBEAFE
Error	1 px #EF4444	#FEF2F2	Error message shown below input
Disabled	1 px #E2E7EB	#F9F9FB	Text: #9CA3AF, cursor not-allowed

3 Data Formatting

All data displayed in AIMS must follow these formatting rules to ensure consistency and readability across screens.

3.1 CURRENCY

Rule	Format	Example
Unit	VND, shown as suffix	229,000 VND
Thousands separator	Comma (,)	1,000,000 VND
Decimal places	None (whole numbers only)	89,000 VND
Price color	#DC2626 (red)	Applies to all product prices and order totals

3.2 NUMBERS

Rule	Format	Example
Large numbers	Comma separator every 3 digits	1,280 pages
Quantity	Integer, no separator needed	20, 3, 142
Percentage	Integer followed by %	10%

3.3 DATE & TIME

Context	Format	Example
Publication year	YYYY	2015
Order date	DD/MM/YYYY	20/04/2026
Timestamp	DD/MM/YYYY HH:mm	20/04/2026 14:30

3.4 TEXT

Field	Max Length	Truncation
Product title (card)	Display up to 2 lines	Overflow: ellipsis (...)
Author name	Display up to 1 line	Overflow: ellipsis (...)
Delivery note	100 words	Counter shown, input blocked at limit
Search input	200 characters	Hard limit on input

- Only UTF-8 characters are accepted in all input fields.
- HTML tags and script injections must be stripped before display.

4 Control Rules

Control rules define how users interact with the system — navigation, validation, error handling, and screen transitions.

4.1 INPUT VALIDATION

All form inputs are validated in the following order before submission:

User submits form → Check required fields → Check format / type → Check value constraints → Proceed

Field	Required	Format Rule	Error Message
Full Name	Yes	Non-empty, text only, max 100 chars	"Please enter your full name."
Phone Number	Yes	10 digits, starts with 0	"Please enter a valid Vietnamese phone number."
Delivery Address	Yes	Non-empty, max 200 chars	"Please enter a delivery address."
Quantity (cart)	Yes	Integer ≥ 1, ≤ stock available	"Quantity must be between 1 and [stock]."
Search input	No	Max 200 chars	–

- Error messages are displayed directly below the corresponding input field in red (#EF4444).
- The form submission button is not disabled while inputs are invalid — validation triggers on submit click.
- After a failed submit, the first invalid field receives focus automatically.

4.2 NAVIGATION & FOCUS

- Tab order:** Follows the visual top-to-bottom, left-to-right reading order on all forms.
- Back button:** Every screen (except Homepage) provides a visible "← Back" button that returns to the previous screen without data loss.
- Keyboard shortcuts:** None required for this application.
- Browser back button:** Supported — the application does not prevent native browser navigation.
- Application startup flow:** The user lands directly on the Homepage when first opening AIMS. There is no splash screen or loading screen; initial data is fetched silently with a loading indicator inside the product grid.
- Secondary / dependent screens:** Screens that are contextually dependent on a parent screen (e.g., product detail viewed from the homepage) are displayed as modal popups overlaying the parent. The parent screen becomes non-interactive until the popup is closed. A close button (x) is always placed at the top-right corner of the popup.

4.3 SCREEN INVENTORY

Screen	File	Description
Homepage	01_Homepage.html	Landing page; links to Product List
Product List Screen	01_Homepage.html	Browsable product grid with sidebar filters and search; currently shared with Homepage
Product Details Screen	02_ProductDetail.html	Modal popup over Product List showing full item info and Add to Cart
Cart Screen	03_Cart.html	Item list with quantities, subtotal, and Place Order action
Delivery Info Screen	04_PlaceOrder.html	Form for name, phone, address, and delivery note
Invoice Screen	05_Invoice.html	Read-only order review combining cart items and delivery info; passes Invoice to Payment
Payment Screen	06_Payment.html	Payment method selection and card details entry
Payment Fail Screen	07_PaymentFail.html	Error state after failed payment; offers retry or return to Cart
Order Successful Screen	08_OrderSuccessful.html	Confirmation of placed order with order number, delivery summary, and items

4.4 SCREEN TRANSITIONS

Trigger	From Screen	To Screen	Type
Open application	—	Homepage / Product List	Direct load; products fetched silently with inline loading indicator
Click "Detail" on product card	Product List	Product Details	Modal popup — product list becomes non-interactive until popup is closed
Click "Add to Cart"	Product Details	Cart	Full page navigation; cart count in header increments
Click "Place Order"	Cart	Delivery Info	Full page navigation; passes cart data
Click "Proceed to Invoice"	Delivery Info	Invoice	Full page navigation; passes cart + deliveryInfo
Click "Proceed to Payment"	Invoice	Payment	Full page navigation; passes invoice
Payment succeeds	Payment	Order Successful	Full page navigation; passes order data
Payment fails	Payment	Payment Fail	Full page navigation
Click "Try Again"	Payment Fail	Payment	Full page navigation; retains invoice data
Click "Return to Cart"	Payment Fail	Cart	Full page navigation; cart is preserved
Click "← Back"	Any (except Homepage)	Previous screen	Browser history back; no data loss
Click "Continue Shopping"	Cart or Order Successful	Homepage / Product List	Full page navigation

4.5 ERROR HANDLING

- Field-level errors:** Shown inline, below the affected input, in red text (12 px).
- System errors** (e.g., server unavailable): Shown as a banner at the top of the page with a neutral background (#FEE3C7) and warning text.
- Empty states** (e.g., no search results, empty cart): Displayed in the main content area with a short descriptive message and a suggested action (e.g., "Your cart is empty. Browse products →").
- Out-of-stock:** "Add to Cart" button is disabled; stock badge changes to red with text "Out of Stock".

4.6 LOADING & FEEDBACK

- Buttons show a loading indicator (spinner) while an async operation is in progress and are disabled to prevent double submission.
- Successful actions (e.g., item added to cart) show a brief status update on the Cart button (cart count increments).
